

(Mast 1)

(Mast 2)

(Mast 3)

Place each mast in the proper hole (cut the "+" in each circle and punch the mast through) and secure under the deck once you've aligned everything with the deck (page 5). Fold up on the dotted lines of the deck and down on the solid lines to make the lower level of the deck (like the red line in the Side View). The tabs will be used to secure the deck to the hull of the ship. Some trimming may be needed.

Roll these main masts tight enough to fit into the circles on the top part of the deck below. Glue or tape the edge so that it does not come apart.

For Mast 1 and 2, take the piece from page 3 and attach it at an angle along the dotted line. You can do this several ways:

- 1) cut the smaller piece at an angle and attach
- 2) cut a hole in the main mast and stick the smaller piece through
- 3) use lots of tape (my favorite!)

For Mast 3, attach the three smaller pieces perpendicular to the main mast on the dash lines. Start Smallest on top and largest on bottom.

Attach the rigging from page 2 to each mast as show below (blue lines)

The mast should look like this:
